8	Artwork Mark	15
8.1	Insert in BlockChain	17
9	Purchase	19
10	Verify	21

After the Internet Identity authentication, the user will land in the home page, where all the available activities will be shown

According to the role, the user will be presented just with the enabled actions

Welcome

SHOW ARTWORK

ADD NEW ARTWORK

BUY DNA CARTRIDGES

Laboratory

LOAD CARTRIDGE CODE IN BLOCKCHAIN

Common Functions

ON LINE MANUAL

Self Define User

The Internet Computer framework, thanks to the Internet Identity, provides a friendly and secure authentication method.

A new user is automatically enrolled on first login, with limited capabilities, and no personal information.

The only thing that is required is a self defined user name. Does not need to be unique in the system

IdentifyMyself

INSERISCI

Copyright © <https://digitaltechne.ch> 2024

This page will show you the artworks hosted on the Archive.

Each row will contain the main information about a single opera (title, author and so on), along with a picture

Opera Image	Work Name	Signature Type	Technique Type	Support Type	Total Number of C...	SheetIdentifier	Dimensions	Annoopera	Owner	DNA mark present
	Figure	Signed	Etching	Paper	3	1	20 x 15	1967	Roberto Pirrone	✗
	Pilar	Signed	Etching	Paper	2	1	12,5 x 17,5	1975	Roberto Pirrone	✗

1 row selected

Rows per page: 100 1-2 of 2

Copyright © <https://digitaltechn.ch> 2024

Each artwork is made up of a small number of paper sheets (the main print run, the Artist's proof, the unsigned copies), so clicking on the picture will lead you to a page with a row for each physical sheet

Opera Image	Work Name	Signature Type	Technique Type	Support Type	Total Number of C...	SheetIdentifier	Dimensions	Annoopera	Owner	DNA mark present
	Pilar	Signed	Etching	Paper	2	1	12,5 x 17,5	1975	Roberto Pirrone	✗
	Pilar	Signed	Etching	Paper	2	2	12,5 x 17,5	1975	Roberto Pirrone	✗

Rows per page: 100 1-2 of 2

Copyright © <https://digitaltechn.ch> 2024

Inside this list page the click on the image will lead to the detailed information [Chapter 6](#)

A green check icon will indicate that the DNA ink has already been placed on the opera and the genomic record has been recorded in BlockChain

New Dossier

The owner of an artwork will create a folder of information in BC, containing:

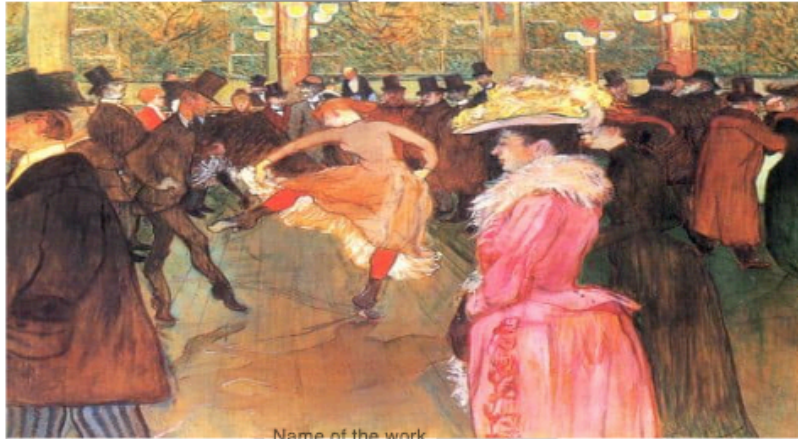

- Base artwork info (this page)
- Support documentation (proof of ownership, condition report and so on), see here for data input [Chapter 7](#)
- DNA info, see here for details [Chapter 8](#)

The basic information of an opera is mainly:

- artwork image
- the title
- the author
- the location of the opera
- the physical support
- some flags to specify the privacy level (owner, location, support info,...)
- date of insertion (auto)
- owner (inferred from the logged user)

New Artwork

Upload file ballo-al-moulin-rouge.jpg

Name of the work

Ballo al Moulin Rouge

Author

Henri de Toulouse Lautrec

Place where the Opera is located

Albi, Musée Toulouse-Lautrec

Type of work

PAPER

Private

☐

INSERT

Batch Insert

This operation is intended for bulk loading of artworks and metadata

- Base artwork infos are contained in a Excel file
- Artworks shall be in jpg format

The Excel file will contain the basic information of an opera, one row per artwork. Header names are meaningful, please use exactly these names:

- Photos
- Date
- Title
- Technique
- EditionNumber
- Dimensions
- date of insertion (auto)
- owner (inferred from the logged user)

Photos will contain just the number of the photo, that will be mapped to the real file name (f.i. 077 is the file DSC_0077.JPG)

Insert Many Artworks at Once

Metadata file (.xlsx format)
Upload JPG files

Dossier Detail

This page will show you all the information about the artwork:

- detailed information
- a collection of documents

Clicking on each document icon you can download the file, or show the image in full resolution

The button **Mark Artwork with DNA Ink** will allow you to register the association among the ink on the physical artwork and its digital representation (the information shown in this page). See details there: [Chapter 8](#)

When the Dna mark is already registered, a different button will appear: **Verify DNA mark**. It will allow you to verify the authenticity of the mark. The descriptive page is here [Chapter 10](#)

NEW DOCUMENT

New Document

In order to better describe the opera, it is usually very useful to add some documents, being them scientific (chemical analysis, f.i.), legal (certificates of ownership, ..), or artistic (studies, attributions and so on).

Documents can be added in any moment, and each document record contains:

- the document itself
- the author of the document
- the title of the document
- document type
- privacy status
- insert date (automatically inserted)
- person that inserted the document (auto)
- file name (auto)
- mime type (auto)

INSERT

Artwork Mark

Initially you have to put the ink on the artwork. The position is important, you have to specify it while you insert data in blockchain.

After usage the cartridge will be useless, the DNA material will be destroyed by a chemical reaction, in order to avoid unwanted further usage

Please note that the ink is completely transparent at the naked eye, and, obviously has been engineered for a long lasting stability

Using an ultra violet lamp, the ink spot will be visible

8.1 Insert in BlockChain

And then the blockchain operation:

- select from the first pull down menu the identifier of the ink cartridge
- select from the second pull down menu the artwork side (front, back or frame)

- select from the third pull down menu the drop position

At the end of this blockchain operation a green check mark will appear in the opera documentation

Purchase

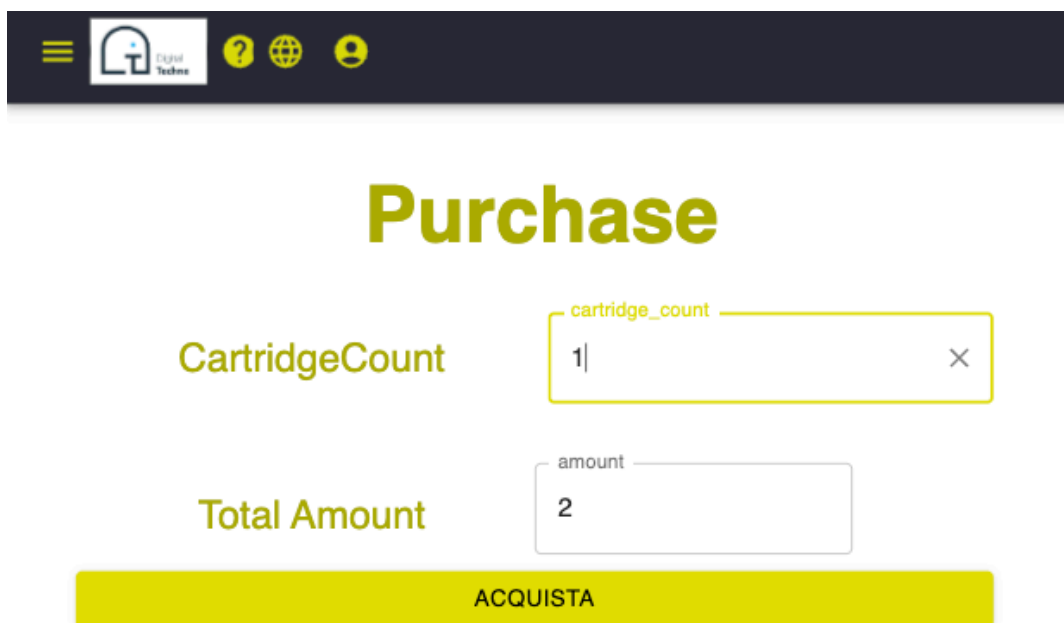

At the core of the Signature Kit there is the Ink Cartridge, containing the unique genetic material.

Please note that the effective DNA analysis is held inside the blockchain, what is transferred to the owner is an anonymous identifier

Cartridges are available in the DigitalTechne warehouse, and can be purchased for the artwork signing. They will be available in different forms and cost:

- single use cartridges
- multiple copies cartridges (print runs of litographies f.i.)
- custom labelled for third party solutions
- bulk purchase
- ...

The current interface is just a placeholder that will enable the use of cartridges by the artwork owner, and does non involve any real payment

Purchase

ACQUISTA

Verify

An important feature of the system is the ability to verify the correctness of the association. In any moment you can prove that the physical artwork is correctly tied to the information in blockchain.

The control, although not real time, can be easily done:

- using a swab you collect a small amount of the DNA material from the physical artwork
- let a laboratory analyze the specimen
- load the laboratory results on DigitalTechne
- have a look at the differences

Verify operation on DigitalTechne is shown here:

- upload the file with the laboratory results
- select from the first pull down menu the artwork side (front, back or frame)
- select from the second pull down menu the drop position

The result is a page that will show the genomic details, where the differences will be highlighted. Moreover, the system will show also the possible differences of the ink position on the artwork
